

# HIPAA Director

## secure, managed EDI

Included with the full SpyGlass solution, HIPAA Director is also available independently to work with your existing legacy system. Don't be forced to send all your transactions through a single "metered" clearinghouse. HIPAA Director helps you "go direct" with as many partners as you have in order to avoid the ever-present transaction costs. Easily manage the various Trading Partner (TP) relationships and support automatic, managed batch transfers directly with a range of providers. Manage all operations using a web browser. Connects to industry leading IBM DB/2 Database.

### Benefits:

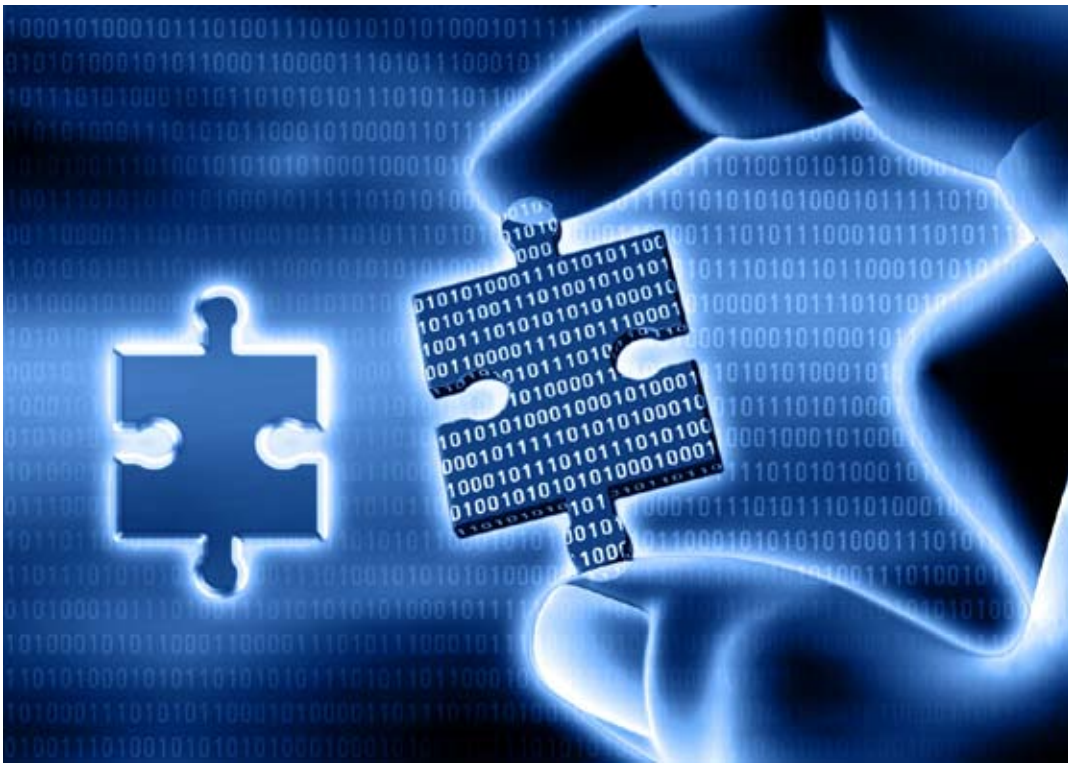

- ◆ *Easily manage changing TP specifications*
- ◆ *Increase reliability & accuracy through automation*
- ◆ *Lower transaction costs*
- ◆ *Eliminate manual login, file encryption & transfer steps*

### Features:

- ◆ *Setup/manage trading partners of all types (imaging, banks, carriers, etc.)*
- ◆ *Support multiple encryption standards*
- ◆ *Initiate & manage file transfers automatically, test or run "live" batches on demand*
- ◆ *Easy mapping by trading partner by transaction*
- ◆ *Email notification of transfers with attached summaries, reports, and files*
- ◆ *Show status & key data for batches (number of transactions accepted & rejected, reason)*
- ◆ *Click through summaries to live claim data*
- ◆ *Use "masks" to separate out report files for special handling*
- ◆ *Maintain archive of all original file data*

### For each Trading Partner:

- ◆ *Store PKI keys, encrypted login credentials, set custom remote and local folders*
- ◆ *Setup custom HIPAA mappings for 837's & 834's that vary from one TP to another*
- ◆ *Control designated encryption & security protocols*
- ◆ *Create transaction schedules that can vary by day of week, and exclude holidays*
- ◆ *Set options for adjudication, special jobs (ie. run SQL's on db), repricing operations, etc.*

# Beacon “BlueBox” for BCBS HIPAA compliance

As your claims system achieves HIPAA compliance, connections with large industry standard partners, like Blue Cross Blue Shield—that have old fashioned, proprietary EDI formats—may require their own separate workflow with custom rules. However, the Beacon Blue Box “Connector” can help standardize those BCBS interfaces.

Groups that want to automate their connections with BCBS networks can avoid the massive custom programming efforts and delays often required for BCBS EDI automation. They can skip the lengthy implementation times and realize the network discount months earlier. Beacon Blue Box simplifies claims operations, automates & streamlines workflows, and capitalizes on HIPAA standards. Connects to industry leading IBM DB/2 Database.

- ◆ Converts proprietary formatted BCBS of Illinois states and National “Blue Card” “incoming” claim files into HIPAA standard 837 for input to existing legacy systems\*.
- ◆ Uses the standard HIPAA 835 output from legacy systems\* to create proprietary BCBS disposition files.
- ◆ Problem claim? Use friendly editing tools to type up the specs, and push back into the workflow
- ◆ Special support for BCBS “R06” adjustment procedures
- ◆ Converts 834 output from legacy systems\* to BlueStar eligibility load format.
- ◆ Supports/requires supplementary storage for customization for special adjustments, dropped claims, front end filtering for eligibility, provider screening, service line order issues, etc.
- ◆ Front end available to filter out non-member claims, provider mis-matches and provider not found issues.
- ◆ “One-click” Blue Card repricing--Integrates with National “Blue Card” system via XML standards.

\* Customization may be required if the HIPAA output of your system or that of any of your trading partners varies from the standard.
