

# SpyGlass Security

*Banking Caliber Security for Your HIPAA Transactions*

## Security Features

### **Roles-based Security Model**

Our rules- and roles-based system allows a business user to easily manage plan setup for increased security and improved workflow systems without the need of a programmer. A personalized icon and phrase located on the login page decreases the chance of phishing.

### **Highest Security Rating**

SpyGlass has received the highest degree of security-based penetration testing available from the PLYNT Certification Program.

### **Secure Managed Transactions**

SpyGlass provides secure, automated and managed file transfers for the HIPAA transaction, plus just about any other type in conjunction with HIPAA Director. All transactions are secured via encryption and best practice protocols.
